

Basics

Introduction and Course Outline

Learning goals

- Understand the scope of the course
- Answers to all open question
- Get an impression of the workload

PEOPLE

Lecturers and tutors:

- Prof. Dr. Hinrich Schütze (weeks 7 & 9-12)
- Dr. Matthias Aßenmacher (weeks 1-6, & 8)
- M.Sc. Leonie Weißweiler (exercise sessions)
- Ingo Ziegler (tutoring session)
- Marwin Härtrich (exercise correction)

Time:

- Lecture: Wednesday, 9.00 - 11.00
- Exercise: Wednesday, 11.00 - 12.00
- Tutoring: Thursday, 14.00 - 16.00

STRUCTURE OF THE COURSE

Central building blocks of the lecture

- Basic concepts (2 weeks)
- Transformer in-depth (1 week)
- BERT (1 week)
- BERTology, BERT's successors and distillation (1 week)
- Other encoder models & T5 (1 week)
- GPT series and Prompting (2 weeks)
- Generative LLMs & RLHF (1 week)
- Multilinguality (1 week)
- Math behind training LLMs (1 week)
- Evaluation (1 week)

STRUCTURE OF THE EXERCISE

Assignments:

- Training RNNs (week 2 – 3)
- Transformer (week 4 – 5)
- Fine-tuning BERT & T5 (week 6 – 7)
- Inner workings & Decoding (week 8 – 9)
- LLama-2 & Prompting (week 10 – 11)

STRUCTURE OF THE EXERCISE

Central other building blocks of the exercise:

- Python essentials (week 1)
- PyTorch logic (week 3)
- Debugging (week 5)
- Huggingface universe (week 7)
- tbd (week 9)
- tbd (week 11)

PREREQUISITES

Machine learning basics:

- A proper understanding of
 - linear algebra
 - loss functions
 - regularization
 - classification vs. regression
 - backpropagation and gradient descent
 - simple neural networks (MLPs)
- Great resource: *I2ML course*

MANAGING EXPECTATIONS

What to expect

- A solid and proper understanding of
 - the central concepts and models of contemporary NLP
 - the capabilities and limitations of different models
- Challenging exercises that deepen your understanding, i.e.
 - you will have to invest quite some time in trying to solve them
 - just checking our solutions won't get you far
- An (inter)actively taught course with motivated lecturers, i.e.
 - we expect you to actively participate in the lecture and ask questions
 - you won't get much out of this course by just enrolling and not showing up

MANAGING EXPECTATIONS

What not to expect

- A prompt engineering course
- Riding the hypetrain
- Only the latest state-of-the-art LLMs (you also need to know the relevant basics to understand what is going on)
- Low workload and easy exercises (you will only learn this thoroughly by investing some time)

MANAGING EXPECTATIONS

Honesty

- No intention to overload you with (unnecessary) work
- Building up proper skills requires **time investment**
- Coding assignments freshly created, we put a lot of work into creating creative and helpful content for you to acquire necessary skills to succeed in this field
- Up-front communication of what is going to be required

MANAGING EXPECTATIONS

Workload

- This is a 6 ECTS course
- 1 ECTS := 30h (i.e. this course = 180h)
- 13 weeks \times 3h presence \approx 40h
- 140h for preparation, self-study, **working on assignments**
- 140h / 14 weeks = **10h / week** (*additionally to in-class time*)
